

The purpose of this study was to assess the feasibility and cost of selected renovation of the existing ILEAS Training Center. Through a collaborative planning process with designated ILEAS representatives, the space needs for the center were identified, concept site and building plans were developed, and a preliminary cost estimate for the renovation was prepared.

The 1971 addition to the original Champaign County Nursing Home of 60,000 square foot lies on 23 acres at the north end of Champaign County's East Campus. ILEAS has redeveloped about 27,000 square feet on the first floor of the 1971 addition for their offices and educational space with the balance of the building basically used "as is" for tactical training and storage. A portion of the 1971 addition basement has been used for equipment storage via the existing loading dock and freight elevator. The original nursing home is sealed off and demolition is planned by the County in 2023.

The scope of proposed site work includes the rehabilitation of existing parking areas along with a new 26 car parking lot addition to bring the total parking available up to the 151 spaces. Some additional 6" thick concrete sidewalk is added to provide access to parking on the west and to access the east ends of wings A and B. The clean-up of existing landscaping and hardscape within the west courtyard along with a covered structure to provide shade for outdoor activities is also included in the site work.

The scope of proposed building improvements will involve a full range of general, fire protection, plumbing, HVAC, and electrical work. In the 10,520 square foot wing B, the general work will include the selective demolition of existing doors, walls, floors, and ceilings as required for the reconfigured space and integration of new or revised mechanical and electrical systems and equipment. New walls, ceilings, doors and toilet partitions will be included as part of the remodeling with new finishes throughout. Wing B will primarily be opened to be used for tactical training along with a breakout classroom space and remodeled toilet facilities. Asbestos abatement will be required for the wing B renovation, and it is desirable to get the abatement completed for wing C at the same time.

It is planned that the existing 8-foot-tall ceilings in wing B be removed so the ceiling can be raised to provide additional height for tactical training. This will require replacement of many of the mechanical, electrical, plumbing and fire protection systems currently located above the ceilings. The existing ceilings also support the roof insulation so new insulation will also be required.

Also included will be the cleanup of existing basement areas including the old laundry room, generator space and locker rooms to provide better access and additional area for storage. A single-use toilet in the basement will be remodeled.

Fire protection work will primarily involve making the required revisions to the existing sprinkler system to support the reconfigured space and raised ceiling in B-wing. It is

important to note, however, that the existing sprinkler system will be retained throughout the entire complex.

Plumbing work will include the required demolition of certain existing bathing/toilet facilities and remodeling of those spaces for continued use.

The HVAC work will include revisions to existing piping, fan coils and ductwork as required for the general work remodeling.

The electrical work will include the required demolition and new power and lighting work to serve the B-wing tactical training and educational space. Also, the existing fire alarm system will be tested after required modifications and the existing emergency generator will be tested as well.
