Radiation Fundamentals, Preparedness, and Training Chicago, Springfield, and Surrounding Areas

Introduction

You are invited to attend a virtual training event jointly sponsored and conducted by the **Federal Bureau of Investigation** and the **Department of Energy's Office of Nuclear Incident Policy and Cooperation**.

This event will take place on **July 21, 2021**, at **1:00 PM Central, 2:00 PM Eastern**. It will be **2.5 hours** in length.

Training Summary

This **online training course** will familiarize participants with concepts related to operating in a contaminated or irradiated environment, particularly from a law enforcement perspective. Participants will understand the basic characteristics of radiation and the levels of danger it poses. They will also receive presentations from the regional FBI Field Office about the security concerns of radiation and how federal, state, and local responders coordinate to protect the community from radiation-related incidents.

Participation

This course is open to law enforcement, fire, EMS, and other first responders; medical personnel; local and state government; and nuclear/radiological or other related industry personnel. The course will be held online via Microsoft Teams.
